WAVE SDK version 1007 Contents

Name	Description
WAVE-SDK-Contents.pdf	This file

Our WAVE SDK consists of 3 parts as illustrated below:

Part I: Unex SDK and relevant documentation

Name	Description
sdk-us-1007-uC.tar.gz	SDK consists of header files (.h), archived object codes (.a), example codes (.c), and reference applications. It supports all the 15 message sets of SAE J2735 standard released in 2016-03. Developers can select the required message set from SDK and reference the example code and header file to develop their own V2X applications.
API-Guide-for-WAVE-Device.pdf	This document introduces command-line interface (CLI) commands and application programming interfaces (APIs) provided by Unex WAVE SDK. The CLI commands help customers to configure the WAVE device and do quick test. The APIs help customer to develop their own application over IEEE 1609.x protocol stack.
Environment-Setup-Guide-for-DSRC-V2X.pdf	This document gives a stepwise illustration about how to setup a development environment for Unex DSRC V2X products
Quick-Start-Guide-for-WAVE-Device.pdf	This document provides a quick glance at Unex WAVE OBU device. It also demonstrates quick tests on sending and receiving packets, checking MIB status, upgrading firmware, and etc.

User-Guide-for-uCoupler.pdf	This document is an overview of uCoupler mechanism and demonstrates an example testing
WAVE-SDK-1007-Release-Notes.pdf	This document lists the release notes

Part II: Autotalks SDK and relevant documentation

Name	Description
sdk-4.11.1-sc-i686-linux-gnu.tar.xz	SDK consists of header files (.h), archived object codes (.a), example codes (.c) for developing custom CRATON firmware and remote CRATON applications.
craton-sdk-4.11.1-api-manual.pdf	This document lists the generic and CRATON-specific application programming interfaces (APIs) that enable software development viz. V2X, MIB, Crypto, CAN, Navigation, Debug and logging etc.
craton-sdk-4.11.1-release-notes.pdf	This document lists the release notes
craton-sdk-4.11.1-user-manual.pdf	This document illustrates how to build custom CRATON firmware and remote CRATON applications

Part III: GCC cross compiler

Name	Description
gcc-arm-none-eabi-4_8-2014q3-atk-1.0.0-linux.tar.xz	GCC cross compiler to compile ThreadX OS image under Linux environment
